

## The New Rubi Micro-Cafe:

The Rubi Micro-Café is a next generation hot drink kiosk that blends industry leading brew and dispense technology with a dynamic touchscreen interface to create a premium branded coffee experience.

Each cup is made using whole beans ground and brewed on demand using a Swiss-made burr grinder and a piston-driven reverse French Press to extract maximum flavor and reduce bitterness. Rubi uses only premium quality 100% Arabica coffee beans, sustainably sourced and roasted to perfection.

With a robust graphical user interface, full beverage customization, and entertaining and informative animations, Rubi changes the way consumers think about coffee from a machine.

Consumers love the café-like experience, with a granite-style countertop and full beverage customization. Lids are kept clean and dispensed one at a time using a custom Lid Saver design. The cups are behind doors that open based on size selected. Customers can use their own coffee mug to reduce waste.

Rubi was designed with a capacity to serve up to 500 drinks before re-stocking is required. Many of the

systems inside will be familiar to experienced operators, with most parts available through existing distributors. Each unit comes with a full bill recycler, card reader, and coin mechanism. Payment module is accessed via separate set of keys to allow for site-level stocking if desired.

A full 18 inch touchscreen/PC controls the action with the consumer and manages the systems inside. Remote telemetry provides service alerts, e-receipts, real time reporting, remote troubleshooting/reboots, promo code functionality, and card payment processing.

Rubi is a great solution for college campuses, health care facilities, workplaces, and any other high quality site where good coffee is hard to find. Learn more at [rubimicrocafe.com](http://rubimicrocafe.com)

### **Rubi Micro-Café Specifications**
